

inter active IXEO travel

The Global Travel & Hospitality Gateway

IXeo's mission is to provide the world with the largest available travel inventory, as a gateway to hotels, resorts, camps and lodges combined with ground services, events and flights. Our aim is to give access to a user friendly system that allows for easy and intuitive planning and booking search by brand, location, motive or lifestyle supported by full destination information. The travel system used by professionals for tailor made packaging all in real time that provides 'Best Value' and 'Complete Choice'.

Revolutionize your website with the IX-e travel & vacation engine

The IX-e booking engine offers a cost-effective solution to benefit from the experience of the leading edge Global Travel & Hospitality Gateway:

You may use the booking engine as:

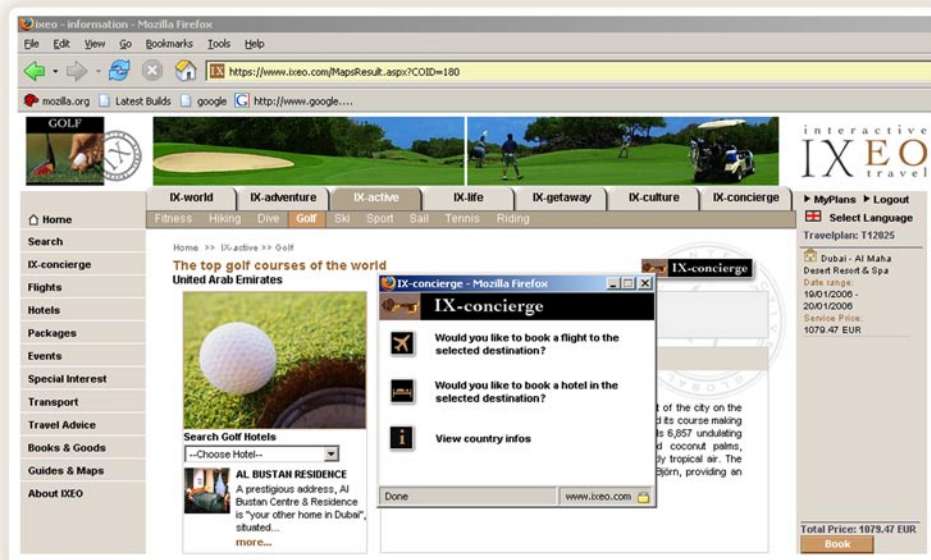

1. A white label engine behind your own web site
2. To enhance the total travel product for consumers direct
3. From anywhere to anywhere with full supporting travel content
4. With interactive mapping and product by motive and lifestyle classification
5. Dynamic packaging capability for personalized & tailored requirements

Business logic of the IX-e booking engine

IXeo uses its unique IX-concierge filtering and pre-selection tools in combination with the IX-brain application to empower your website.

The most common approach is for the consumer to get the information from your site, to select your products and place them into the area on your site referred to as “the shopping trolley”.

The IX-concierge technology then suggests additional travel offers such as hotels, flights, or local services like theater tickets, golf, spa, etc. Additional services such as destination content, local event diaries etc. can also be implemented.

The IX-e solution includes

1) Full IX-e-booking engine with unique slice & dice capability, trolley packaging, dynamic bundling, trip planner, and integrated destination information

2) IX-concierge, which is a unique travel and destination concierge that allows the user to link motive with destination, products, hotels, flights, events, etc.

3) IX-rez for hotels is a unique online Central Reservation System (CRS) to allow independent hotels, resorts, lodges, camps and guest houses to place images/content-such as product descriptions; rates/packages/availability all online.

4) IX-rez for tourism service companies and ground handlers is the equivalent CRS to go live to market offering culture tours, special events, destination management services, etc.

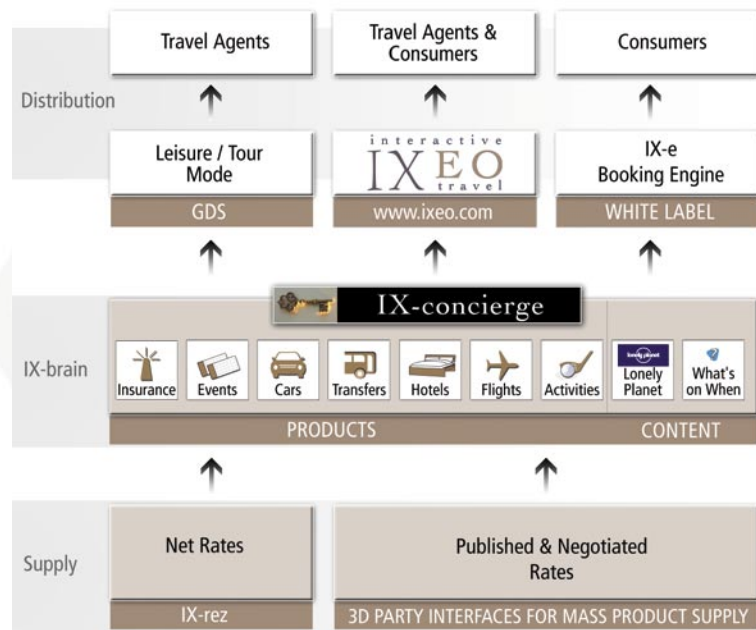

5) Fulfilment service for online cash management, credit card, billing service, promotional campaigns, commission payment and supplier payments

6) Fulfilment service for airline ticketing, IATA licensing, travel insurance and association protection.

7) Scheduled air travel as well as low cost, charters and no frill carriers.

8) Special event content online for each destination.

IXeo platform model

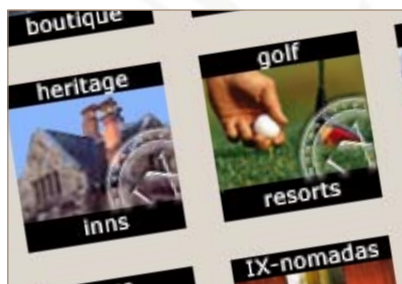

Advantages of the IXeo travel gateway

View & search travel components

The intelligent filtering behind the IX-application allows the user to find travel offers based on different motives or lifestyle classifications, such as golf, wellness, safari, romantic etc.

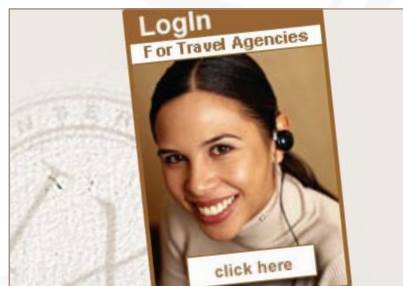

Daily updates in availability

All bookable items in the database are updated daily for availability and prices, giving not only our suppliers the possibility to manage and sell last minute inventory but to travel agents having access to a wider choice of options.

My plans

All travel items can be saved into a travel plan to be completed, modified or booked at any time. For travel plans already booked, this section provides information on the itinerary, trip details and complementary information such as visa regulations, country information, etc.

Login for travel agents

With a dedicated login for travel agents, the commission handling system is reliable and easy to apply.

IXeo service & fulfillment

Online documents

All planned and booked tours or services are confirmed electronically to the travel agent.

The document design can be customized with logo and colours accompanied by a watermark to make the document more secure.

Backoffice documentation

All final travel plans and bookings can be retrieved any time online to view, edit, modify or cancel single components or entire plans. The access to this database is password-protected.

Service- and call centre

IXeo provides full support to all suppliers and can also operate the voucher issuing, ticketing and cash fulfillment behind the solution, if desired.
