

## FOR IMMEDIATE RELEASE

# **TTI Technologies and AutoClerk Align to Provide Greater Enhanced Guest Service and Security**

**New York—December 07, 2010—** TTI Technologies, the hospitality industry's leading provider of [Driver's License/Passport Scanners](#), Business Centers, Concierge Services and other hotel solutions announced today that it successfully completed integration of Scan2PMS with AutoClerk, allowing its client hotels the ability to capture accurate information such as guest photo, name, and address at check-in and populate directly into AutoClerk's property management solutions.

"We are excited to be partnering with TTI to make identification scanning available to our hotel customers," said Gary Gibb, president of AutoClerk, Inc. "The integration of Scan2PMS with AutoClerk Property Management System can significantly reduce data input at the front desk during check-in, allowing a clerk to focus attention on the guest. Additionally, it provides a seamless means by which to store a photo record of a hotel guest, which is key for avoiding false charge back claims. AutoClerk continually looks for ways to bring value to its customers through innovative technology tools, which allows them to work more efficiently, stay competitive, and thereby increase revenue."

"Scan2PMS provides an additional host of guest-service and asset-management benefits for hotel technology providers like AutoClerk. On top of the system's ability to protect guests against identity theft and hotels from false charge-back claims, Scan2PMS streamlines guest check-in and captures guest history data for post-stay marketing," shared Alex Lerner, Chief Technology Officer for TTI Technologies. "With accurate and validated guest information, hotels can stay in touch with its guests before, during and after their stay, which greatly assists in building guest loyalty and brand differentiation. Scan2PMS is all about providing personalized, welcoming service that is both safe and effective. Further, it eliminates the unsafe practice of photocopying IDs, along with associated time and labor costs."

"Becoming a joint partner with AutoClerk was seamless and efficient. Their group provides well-designed software that delivers online, measurable results backed by responsive service and implementation," Lerner commented. "We look forward to expanding awareness of our integration and helping hotels streamline operations, increase security and deliver exceptional guest service."

### **About AutoClerk**

Founded by Mr. Gibb and his partner, Ed Bear, in the early eighties, AutoClerk's service to the hospitality industry spans three decades and now enjoys a well-established nationwide presence. Its first version of the software, a dos-based program, handled the basic hotel operational functions, such as check-ins, check-outs, reservations and night audit. Today's system offers sophisticated group functionality, dynamic rate tiers, yield management, custom packages, and a tape chart with a very friendly and powerful drag & drop user interface. Its latest version is also PABP validated per Visa's strict PCI data security standard. Based in Lafayette, California, and still owned and operated by the founders, AutoClerk serves hotels across the country with additional sales representation in the Mid-West and Canada. For more information, see <http://www.autoclerk.com> or contact Scott Williford at 925-871-1810.
