

Cloud native property management system

PMS

Broaden your global reach, support your regional requirements and minimize IT overhead. Benefit from open integration standards and have truly flexible, scalable operations.

A cloud native, enterprise, single and multi-property PMS that provides a better user experience, lower cost, reduced IT support and delivers all the advantages of mobile.

protel Air:

- ▼ **Open:** seamless integration with third-party applications
- ▼ **Scalable:** from zero to tens of thousands of rooms
- ▼ **Efficient:** optimized for speed in a browser environment
- ▼ **Cost effective:** Low initial investment, flexible pricing
- ▼ **Unified:** multi-property, multi-platform, desktop and mobile usage
- ▼ **User-friendly:** Intuitive and modern design reduces staff training
- ▼ **Safe & reliable:** Data security and redundancy synonymous with a modern cloud environment

protel Air

protel Air is a cloud native, fully internationalized, enterprise property management system for hoteliers and accommodation businesses, from small independents through to global hotel groups.

protel Air provides the sophistication to manage even the most demanding hotels, locally or on a global scale. It allows the management of operations in an agile way, so businesses can be responsive to change and minimise the IT disruption normally associated with hotel acquisitions and disposals.

protel Air is platform independent, has mobile solutions, hotel apps, and can be deployed in a private or public cloud. It also has a broad spectrum of interfaces, designed around our open systems approach, that connect to other key systems.

protel Air features:

- ▼ **Single or multi property options**
- ▼ **Seamless and automated guest journey communication from pre-stay to post-departure**
- ▼ **Fully integrated MICE module**
- ▼ **Multiple integrated web booking options**
- ▼ **Integrated GDS and channel management**
- ▼ **Mobile apps for staff and guests**
- ▼ **Powerful, user-driven business intelligence and reporting on the fly**
- ▼ **Seamless interfacing to all major third party systems**
- ▼ **Benefits from over 20 years hotel management systems experience**
- ▼ **PCI Compliant**

Scalable whatever size

protel Air's technical architecture delivers a stable, high performing platform that is designed to scale from a small independent hotel to large international chains.

Unified systems

protel Air is designed with both single and multi-property environments in mind and can run across multiple operating systems, browsers and devices.

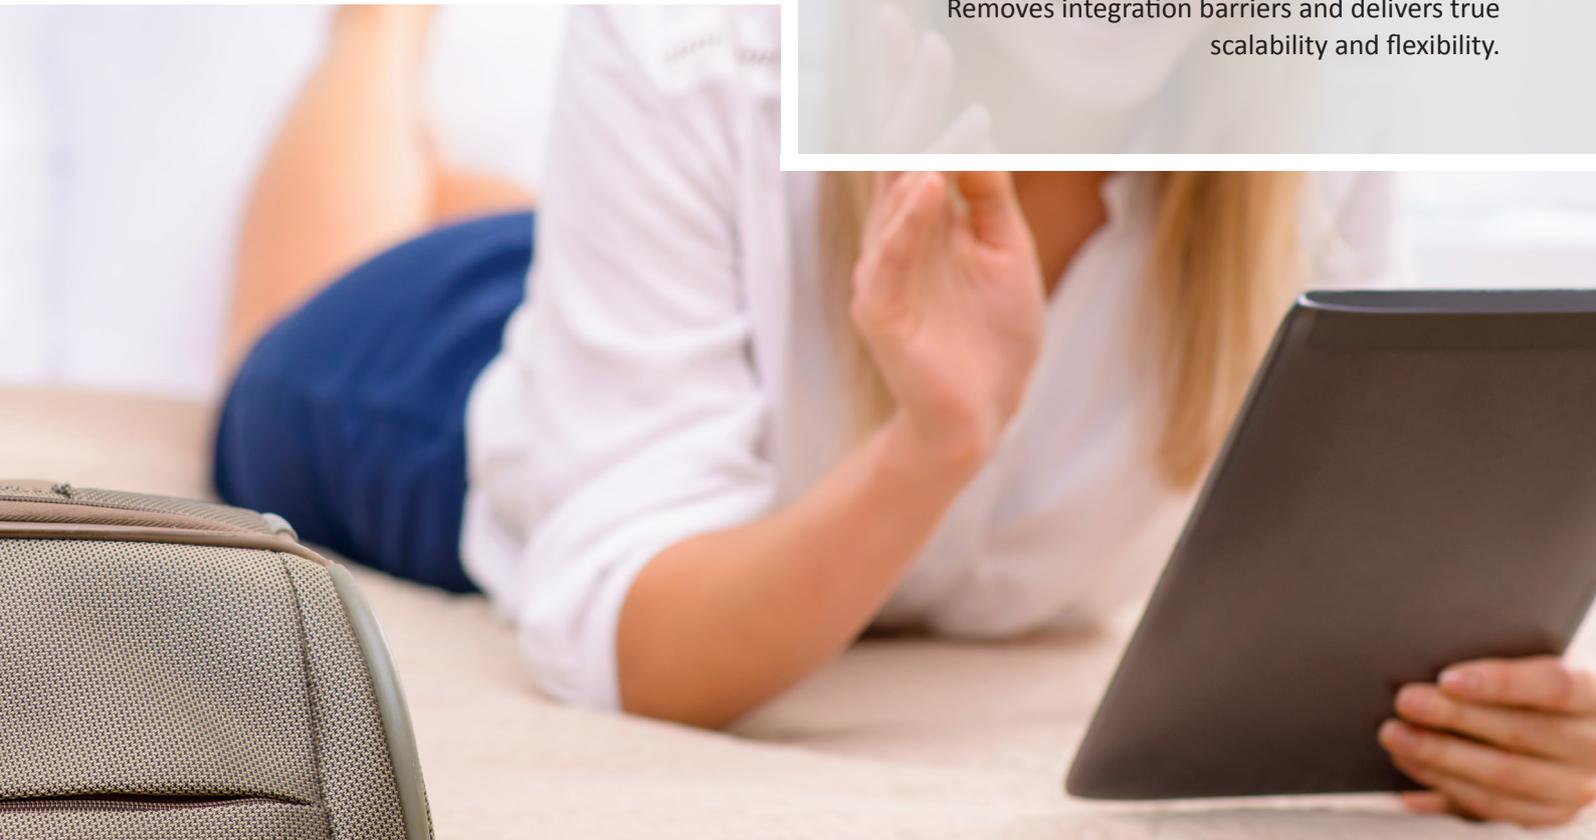

Optimal performance

As a ground up, cloud native development, protel Air takes advantage of the latest technologies to maximize performance and provide a great user experience. It delivers greater efficiency and a better guest service.

Intuitive, advanced PMS, built on a SaaS model.

Removes integration barriers and delivers true scalability and flexibility.

Open integration to third parties

protel Air is built using the most recent technologies, thereby eliminating complex IT integrations that were the norm with legacy systems. Open systems are at the heart of Xn protel's philosophy.

Reduced training

Created for the modern user, protel Air is comparable to mobile and native apps in terms of usability, look and feel. A HTML5 design makes it intuitive, user-friendly and helps eliminate the need for training.

Reliability and security

Using Amazon Web Services (AWS), one of the major global cloud platforms, protel Air has the most comprehensive and up to date security and redundancy technologies. Private cloud deployments are an alternative option, where strategic business requirements and volumes permit.

Cost effective

Utilize the latest open source cloud technologies and have significantly lower costs, compared to traditional property management systems. Low initial investment and flexible pricing are also an advantage.

Air

Xn protel Systems is a global hospitality management software company specializing in property management, central reservations, point of sale and activity management solutions. Our highly functional, cloud-native and open systems provide the latest technology and flexibility. They help world-class hospitality companies in over 50 countries to optimize revenue generation, simplify service operations and enhance the quality of guest communications.

Our next generation, global solutions are robust, highly scalable, feature-rich and backed by outstanding customer service and support. Our dedicated team of highly experienced hotel, hospitality and technology experts work hard to understand customers' needs and the issues they face. Located across our extensive network of offices in the UK, Asia and Middle East, our specialists provide the best advice, solutions and support to make sure customers meet the needs of local markets and achieve their business goals.

We are committed to:

Creating open systems: Working closely with our customers and partners we adopt industry standard protocols to break down traditional integration barriers. Creating truly open, flexible solutions that support guests' growing appetite to be more in control of their stay.

Developing cloud-native products. Our newest technologies are born in the cloud. That means our customers benefit from the latest innovations, can take full advantage of mobile and achieve a lower cost of ownership.

Being easy to do business with. We understand the frustration that comes with unresponsive and inflexible suppliers. We're not like that. And we don't take our customers for granted. A customer-centric approach is in our DNA, from preparing quotations through to resolving support calls.

The Company was formed in the UK in 2002, as Xn Hotel Systems. It was then renamed in 2015 as Xn protel Systems when protel hotelsoftware became a shareholder.
